ABOUT ME

I am a second-year Computer Science student at the Informatics Institute of Technology. My area of specialization is front-end development. I am passionate about React and have a versatile skill set that includes Python, Java, SQL and prototyping tools like Figma. I am eager to secure an internship position within a dynamic software company where I can apply my expertise, collaborate with experienced professionals, and contribute to innovative projects. This will also help me enhance my skills and knowledge in software development.

Undergraduate Student

UNIVERSITY PROJECTS

Software Development Group Project

September 2023 - Present

- InSync is a customer support application powered by AI that streamlines the support process for banks. The project aims to help banks overcome the challenges of providing efficient customer service. The proposed voice-based system is designed to enhance customer service by offering instant responses, eliminating the need for customers to wait on hold. This solution drastically improves response times, making call handling more efficient.
- Technology Used: React Native, JavaScript, Python, Flask, MySQL

Estate Agent Client-side Web Application

2024

- Technology Used: React.js

Westminster Shopping Manager

2024

- Technology Used: Java (OOP) , Swing and AWT libraries

University Grading System

2023

- Technology Used: Python

Multimer Application Redesign

2023

- Technology Used: High-Fed and Low-Fed Prototyping (Axure RP)

SKILLS
